

AI Business Analytics Report

This report presents a comprehensive analysis of the uploaded dataset including statistical analysis, business insights, machine learning prediction and anomaly detection.

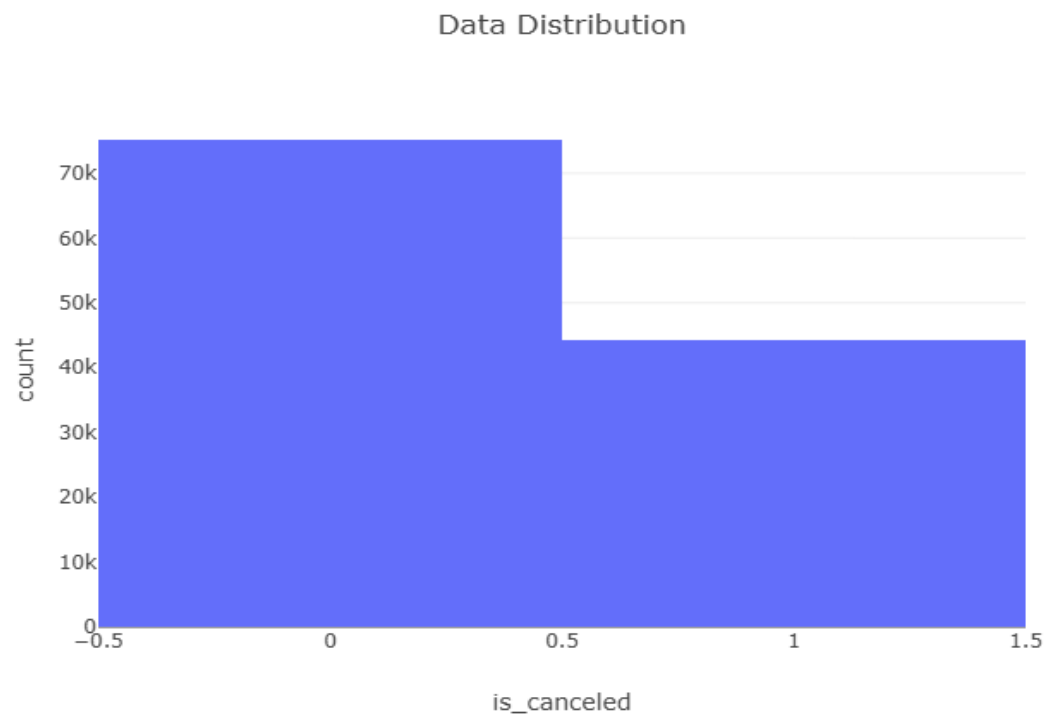

Dataset Summary

Total Rows: 119390

Total Columns: 32

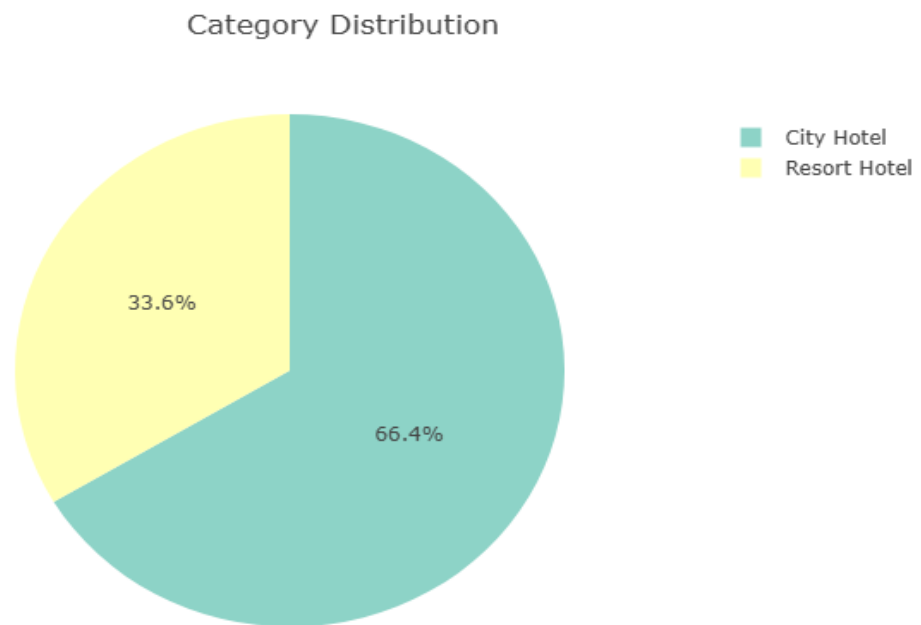

Dataset contains both numerical and categorical variables representing business related data.

Distribution Analysis

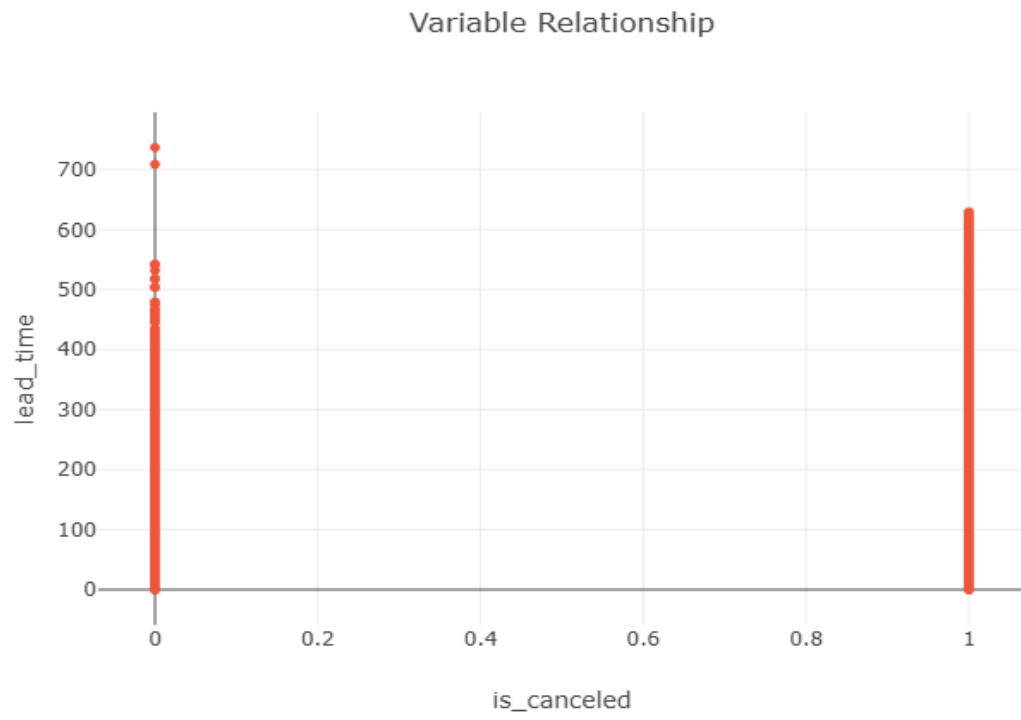

Histogram shows how numeric values are distributed in the dataset.

Category Analysis

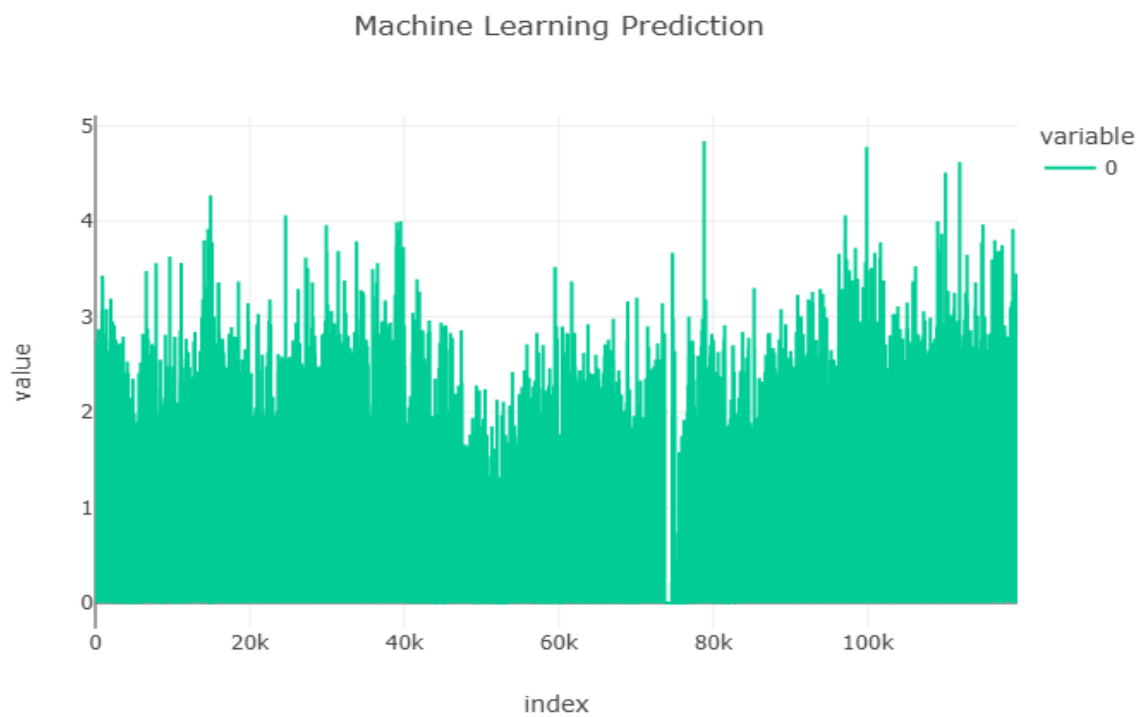

Pie chart represents contribution of different categories.

Correlation Analysis

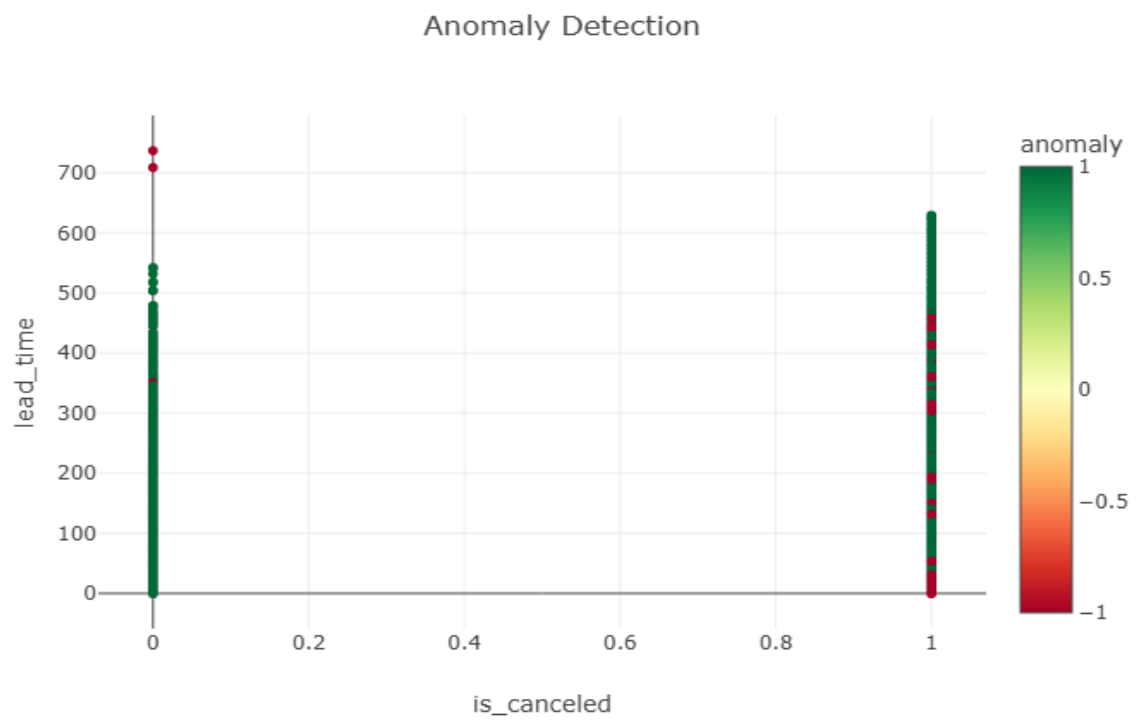

Machine Learning Prediction

Random Forest regression model predicts expected trend based on historical patterns.

Anomaly Detection

Isolation Forest algorithm detects unusual observations that deviate from normal data patterns.

Business Insights

Average value of is_canceled is 0.37

Most frequent category is City Hotel

The dataset shows overall stable performance trend with potential business growth opportunities.
